

Dichtomatik Nitrile U-Cups are designed to fit in most U-Cup seal glands. They are manufactured in 70, 80, and 90 durometer Nitrile depending on the profile. The profiles are rated for dynamic applications with a rod speed of 1.5 ft/s (0.5 m/s). The pressure ratings can be increased with the use of a Back-Up Ring.

ADVANTAGES

- Low Friction Performance in Rod or Piston Applications Assures Easy Movement without Excessive Drag
- Ideal for Pneumatic and Low-Pressure Hydraulic Cylinders
- Easy Assembly: Stretches or Snaps into Place Resulting in Lower Assembly Costs

Materials

Abbreviation	Full Material Name	Advantages
NBR (Standard Material)	Acrylonitrile-Butadiene Rubber (Nitrile)	Nitrile is suitable for temperatures between -40°F and 212°F (-40°C to 100°C)
FKM*	Fluoroelastomer (FKM)	FKM is one of the most highly temperature resistant of all commercially available elastomers with an increased temperature range of 5°F to 390°F (-15°C to 200°C). FKM is also great for oil resistance and chemical resistance.
HNBR*	Hydrogenated Nitrile (HNBR)	HNBR has high tensile properties, low compression set, good low temperature properties, heat resistance, excellent ozone resistance, good resistance to aggressive oils, resistance to crude oil in the presence of hydrogen sulfide and amines, and resistance to alkaline and oxidizing media. HNBR is primarily used in oil field applications. HNBR has a temperature range of -40°F to 300°F (-40°C to 149°C).
XNBR*	Carboxylated Nitrile (XNBR)	XNBR is harder and tougher than standard nitriles. It also has higher abrasion resistance, modulus, and tensile strength than standard nitriles. XNBR is suitable for temperatures ranging between -40°F and 212°F (-40°C to 100°C).
